Dear Sir,

I have sent according to
your request - 2 Cameras obscura
2 Anamorphoses - & 2 Optical Ma-
chines which I hope you will approve
the Cameras have 3 oblong Lenses, viz
the distant object, one for near objects
& the third to be combin'd with either
of the former mention'd glasses making
a still shorter focus, which serves for
the purpose of taking likenesses, or
objects of still life &c.

The square frame contain'd a circular
Lens is to be applied to the front aperture
of the Chimney & the 3 Lenses to be
removed & entirely - the Chimney should
then be taken out - & put in again
with the front of it towards the

Back of the Camera - that being done
unhook the front Board of the camera
Place your Print or In inverted at
the Bottom. leaving the Ino^2 open as
describ'd & you Have a complete Ino^2
for view: Prints, or what is term'd
a Logroscope.

To one of the Cameras I Have
furnish'd an apparatus to be connect'd
with the front of the Ino^2 for the
purpose of receiv: an object intended
to be copied viz: a Print, Hieroglyphics
Painting, animals, &c. The upper
Part slides into two grooves made
in the Upper part of the camera & is
near to the Chimney & so that the whole
Frame is connect'd & projected when
join'd to or I mean from the Ino^2 &
two of the strong Lenses should be us'd

There is also a Stool for the convenience
of the owner of the Ino^2 & two Holes
on the under side of the camera made
to receive two Pins of a Portable
Camp Stool to support it: - This
Stool is seldom serv'd with things
as it cannot be pack'd with it
& may be made in any Country;
There is also a Curtain which may
be us'd occasionally instead of the
mat: front of the Camera

I Hope your situation ac-
with your wishes & that you enjoy
a good State of Health, - I am sorry
to acquaint you that my Brother is
no more. - I success him in the Pro-
pan a be; should you though you Have
a demand for any Ino^2 in that
Line I should be Happy to supply
you, - or indeed any other within in
the Optical & Math: or w: good Allow
