

J Peter Project  
Professor of the Sublime Mechanics

Present my most respectfull compliments  
to the Ladies and Gentlemen of the Sublime  
and beg leave to say before some of my  
most usefull and most sublime invention

1<sup>st</sup> Anemometer or Love Gauge. — It

is well known that <sup>the</sup> many heats, sickness  
and anemias which take place after  
marriage are the consequence of mutual  
deception during courtship. — The An-

is intended to prevent this. Any  
Lady possessed of this instrument will  
be enabled to detect with what is real  
from what is counterfeit in the conduct

of her Lover. In Example. She will

by the Anemometer determine the nature and  
quality of a sigh, whether from the distress  
of the Breast, or merely an artificial  
breathing in the Larynx. — Also the nature

of all sorts of looks from the limed besee-  
low glance, to the broad stare and vulgar  
Gaze.

A more ~~simple~~ <sup>simple</sup> than the discovery of this  
great importance but this will be described  
in the private sealed instructions which ac-  
company the instrument - The next in-  
vent is my.

Lectoflora or Red Pumpkin. - The in-  
vention of the great pumpkin deserves credit  
of this country - On first seeing it, the  
utility of a similar invention for a bed  
struck me. This I have now accomplished.

The Lectoflora is an automatic  
machine, it may be hung up in any  
part of the bed, at a greater or less distance  
as circumstances may require - N. B.

Wheaton had an account of L. & J. and Genl.

Wheaton on the wrong side of fifty

may have the Lectoflora on a similar

scale and so as to be perfectly adapted

to every degree of decreasing temperature

The only other invention that I shall

mention at this time is my

Sansit Molerum - or Mill. for rendering

Manuscript into English Every Jew on  
his return from the Jews must compare  
with to set a figure in oriental literature  
But business in the town, and Court, letters  
and other necessary avocations in the  
evening will not allow time for acquiring  
Greek Knowledge in the usual way. Hence  
the great utility of the <sup>Small</sup> Molenum. For this  
Mole is so contrived in its construction  
that a well written piece of Manuscript thrown  
into the machine, after a certain number  
of revolutions come out in good English

N.B. Two able Readers must attend the op-  
eration - A Friend has just ~~been~~ hinted  
that if the Mole could be adapted to  
Arabic, Persian, Hindostani, and Bengali  
It might be of great use to such Students  
of the College, as cannot bear the inopportu-  
nity of attending public lectures. But  
this <sup>with many other</sup> improvement can be introduced only  
through the medium of the College Council
