This book is a collection of contributions from leading scientists in the field of symbiosis research outlining the present status of endocytobiosis studies on the most important group of insects. Emphasis is on the results of experimental symbiosis research on the morphology, physiology, and genetics of selected insect groups. Insights provided by the new interdisciplinary research field of endocytobiology is considered in interpreting experimental results of symbiology. Various insect endocytobionts are discussed with regard to their evolutionary development, reflecting the current status of evolution research. Special attention is given to the phylogenetic and systematic classification of endocytobionts. Also discussed in comparison with the similar system of ticks are all endosymbioses found in roaches, termites, ants, cicadas, coccids, aphids, flies and beetles.

INTRODUCTION, GENERAL ASPECTS: Insect Host Immune System and Endocytobionts: Their Advance Strategies; Vertical and Vector-Borne Transmission of Insect Endocytobionts and the Evolution of Benignity; Insect Endocytobiosis as a Model System for Egg Cell Differentiation

SPECIAL INSECT SYSTEMS: Endosymbiosis of Ants with Intestinal and Salivary Gland Bacteria; Termite Endosymbiosis;

Blattid Endocytobiosis: *In Vitro* Tissue Culture Model; Endocytobiosis of Leafhoppers with Prokaryotic Microorganisms; Biochemical and Molecular Aspects of the Aphid Endocytobiosis Coccoidea Endocytobiosis; Endocytobiosis in Coleoptera: Biological, Biochemical, and Genetic Aspects; Dipteran Endocytobionts

A COMPARABLE SYSTEM: Interactions between Rickettsial Endocytobionts and their Tick Hosts

SOCIAL INSECTS

An Evolutionary Approach to Castes and Reproduction

This comprehensive multi-author volume introduces in the modern understanding of the fascinating world of insect sociality. These highly complex non-human societies have evolved impressive solutions for many problems of social life.

Reproductive strategies and important regulatory mechanisms are discussed, pointing out the role of hormones and pheromones in caste development and caste functions. The physiological basis and the sociobiological aspects of reproductive differentiation and the resulting specializations in social insect evolution, raising caste formation and sophisticated regulations of intracolony homeostasis are treated.

SAN ANTONIO 1990

International Symbiosis Congress

Jerusalem, November 17-22, 1991

The program will be arranged to encourage comparative discussions in different symbiotic systems and is therefore planned according to topics rather than types of symbiosis. There will be plenary lectures, parallel symposia, workshops, poster sessions and commercial exhibits. Posters will remain on display throughout the Congress.

Topics

Nutritional interactions, carbon and nitrogen metabolism
Transport mechanisms
The host-symbiont interface
Mutual regulatory and morphogenic effects and structural coadaptation
Regulation of symbiont population
Recognition and specificity
Molecular genetics of symbiotic interactions
Symbiosis and genetic exchange
Trophic links, recycling and conservation
Transmission of symbionts
Symbiosis and development of new structures and functions
Evolutionary consequences of symbiosis
Ecological adaptations
Ecology of the rhizosphere
Behavioral symbiosis
Symbiotic virus-host relationships

Workshops

Applications of modern techniques to the study of symbiosis
Teaching Symbiosis
