**there's
more
to CGE
than
most folks**

For instance, even as you scan this message, research and development teams serving our 22 CGE plants are seeking, not only to improve our existing products but are exploring many fields of potential promise. Some of these areas of interest are as dissimilar as chemical and metallurgical, hydraulics and electronics, heat transfer and aerodynamics to mention just a few.

Why such diversification? Because at Canadian General Electric we believe in making major risk investments in product fields that show future promise. These investments are based on the conviction that leadership in industry is achieved by innovation in the development and application of new products and technology more than by merely attempting to get a larger share of the market for existing products ... and why you are sure of more of the best now, and in the future.
