# SYMBIOSIS

AN INTERNATIONAL JOURNAL

SYMBIOSIS publishes results of original research contributing to the understanding of symbiotic interactions at the molecular, cellular and organismic levels. SYMBIOSIS aims to introduce new or unknown symbioses for research in symbiology and intends to provide a central information point for this intriguing subfield to enhance interaction among researchers in its various sectors.

TOPICS of particular interest are: Nutritional interactions, mutual regulatory and morphogenic effects, structural coadaptations, interspecific recognition and specificity, ecological adaptations, evolutionary consequences of symbiosis, culture and other specific methods used for symbiotic research.

SYMBIOSIS publishes articles which are accounts of original studies, review articles, book reviews, meeting reports and a calendar of events.
