Comet

At the Arcon: node 11 July

Distance 130 millions of miles

from the sun - Motion retrogr.

and the orbit passed within 39

of the pole of the heavens - Near

the sun on the 12th Sept, and to the

earth on the 11th Oct. its Dist.

from the latter ^{Halley's} 113,630,000 miles

On the 22 Oct the comet will

be equally distant from the sun

and the Earth, and about 3 days

after, the distance from the Earth

will begin to increase very rapidly. It will probably be visible

but near the end of Dec

Distance from the Path

Miles

11. Oct. - 113,630,000 nearest the Earth

12. — 113,940,000

23. — 116,203,000

25. — 118,706,000

Nov 1. — 126,616,000

19. — 214,798,000

Had the Comet made its appar

5 months sooner its nearest

distance from the Earth would have

been only 44,603,000 miles, and

the heat instead of 12° would have

amounted to 30° degrees
