

P. Lectures on Chemistry  
Lect. 1<sup>st</sup>

Subcellity of human nature  
Man compared with other ani-  
mals. — They have many powers  
in common with him —  
The power of generalization, peculiar  
to man.

Intellect may be considered as  
carrying either in large measure  
or particular — Hence a division  
into Dynamics and Cosmology  
actions. — The former relates  
to the motions and actions of  
the great masses of matter, and  
is proper to the objects of Cos-  
mology. ~~The latter~~  
Philosophy  
Cosmology as attraction the body  
of no change — Ex: Electric  
attraction attraction

In Chemical attraction, a total  
change takes place. The act  
and air from produces green  
which is substance different  
in its properties from either  
of the two ~~original~~ materials  
which produce it.

Acids exist in three different  
states. 1. Solid 2. Fluid 3. Vapor  
Some result from different com-  
binations. 1. Solids with Solids  
2. Solids with Fluids 3. Vapors  
with Vapors 4. Solids with Fluids  
5. Fluids with Vapors —

Experiments

6. Great Promotes Solids  
7. Radix emulsi Chamaemeli  
only in a certain proportion  
Exp.

8. Lini attract. moribus per  
an. vultu etc. succat. sicut  
in the proportion of 1 to 3  
unit in Lini vultu et in an  
1 to 300

9. Gum  
Cambray, vol. colour and  
Spuff. Great on all changed  
by brand all.

10. Lini attract.  
Exp: Lini in Manni acis  
preps: by vol. alk. Mui  
Disengaged by fixid alk.  
fixid alkali has a great  
attract to Manni acis the  
substance with
